EDUCATION

Gustavus Adolphus College – St. Peter, Minnesota, USA

B.A. in International Management – May 2017

GPA: 3.303

PROFESSIONAL EXPERIENCE

IT Support Technician

PRETSL | Remote | **August 2022 – Present**

- Provide technical support to restaurant teams across multiple locations, focusing on software, hardware, and network issues.
- Collaborate with business teams to gather data on customer behavior and sales trends, leveraging insights for targeted improvements.
- Implement and maintain IT systems, ensuring reliable communication of sales data across platforms.
- Provide data-driven insights to the leadership team to improve restaurant sales, by optimizing menu through data analysis.
- Train management and staff adequately to be fully operational by go live day

UX/UI Designer

SCOLPTA | Remote | **September 2021 – June 2022**

- Collaborated with cross-functional teams to design, test, and maintain software, integrating feedback from user testing to improve the UX.
- Conducted data analysis from usability tests to inform design decisions, ensuring that interfaces aligned with user expectations and business goals.
- Led team efforts in conducting A/B testing, generating user insights, and refining the digital product to improve user engagement by 20%.

Graphic Designer

NOLLE DESIGN | Remote | **July 2020 – June 2022**

- Assisted in data collection and analysis to continuously improve user experiences for international clients, supporting business expansion into new markets.
- Designed wireframes and interfaces, using data-backed insights to deliver user-centric designs that enhanced overall site usability.
- Collaborated with the development team to ensure design implementation aligned with user research and data findings.

PROJECTS

EuroShots 2024 Football Data Analysis

Self-Directed | [GitHub Repo](#)

- Built a comprehensive football data analysis project focused on shot statistics from Euro 2024 using **Python** and **Pandas** for data manipulation and cleaning.
- Collected, processed, and analyzed player performance data to evaluate shooting efficiency and trends across multiple seasons.
- Visualized shot data using **Matplotlib** and **Seaborn**, providing insights into player performance and team strategies.
- Implemented a modular design for easy updates and scalability, allowing for additional features like filtering data by players, teams, and leagues.
- Managed the project lifecycle using **GitHub**, tracking changes and collaborating on potential improvements.

Homelab Infrastructure Monitoring Stack

Self-Directed | [GitHub Repo](#)

- Built a full observability stack with Prometheus, Grafana, and Alertmanager to monitor Pi-hole (70K+ daily queries) and multi-host system metrics.
- Implemented 7 automated alert rules with mobile notifications for proactive incident detection.
- Simplified over-engineered system by 92%, consolidating multiple monitoring stacks into a unified Prometheus solution.
- Configured Docker Compose orchestration with HTTPS (Caddy) and automated backups for production-ready infrastructure.

****Technologies****: Docker, Prometheus, Grafana, Alertmanager, Caddy, Linux
